## SUMMARY

---

Senior Data Scientist with 8+ years of experience designing and deploying AI, machine learning, and advanced data analytics solutions using Python and PySpark. Expertise in predictive modelling, enterprise Gen-AI, statistical analysis, prompt engineering, and multi-agent systems to solve complex business problems and enable data-driven decision making. Experienced in collaborating with cross-functional teams and delivering scalable AI solutions on Azure and AWS.

## KEY SKILLS

---

- **Data Engineer:** Python, SQL, PySpark, Databricks, ETL/ELT, Delta table, Delta live tables
- **AI/ML:** Scikit-Learn, XGBoost, LLM finetuning (Lora, PEFT), HuggingFace
- **Gen AI:** LangChain, LangGraph, RAG, Multi Agent Systems
- **Automation Tools:** Power Apps, Power Automate, Microsoft CoPilot, Ansible Roles CI/CD
- **Cloud:** Azure (AI Search, Blob, event grid, App service, Cosmos DB, ACR), AWS (EKS, Fargate, ECS)
- **Certification:** Microsoft AI/ML Engineering

## PROFESSIONAL EXPERIENCE

---

**Chevron (Veraxion Payroll)** | Bengaluru, India

Feb '26 -

*Senior Data Scientist*

- Collaborated with cross-functional teams and business stakeholders to translate business requirements into scalable AI and machine learning solutions.
- Developed an agentic multi-agent AI system using LangGraph for Text-to-SQL, RCA, and enterprise Q&A, reducing query latency by 70% and transforming static dashboards into natural language interfaces
- Designed and deployed an enterprise Retrieval-Augmented Generation (RAG) platform on Microsoft Azure using Azure AI Search, Azure Functions, FastAPI, and Cosmos DB, enabling scalable hybrid retrieval and AI-powered knowledge discovery across 10,000+ enterprise documents.
- Built an event-driven document processing pipeline on Microsoft Azure using Event Grid, Azure Functions, Document Intelligence, AI Foundry, and Cosmos DB for real-time ingestion, classification, and metadata enrichment

**Shell India Markets Pvt. Ltd.** | Bengaluru, India

Apr '20 - Jan '26

*Data Scientist*

- Applied structured problem-solving and critical thinking to design analytical models and recommend AI-driven solutions for complex operational challenges.
- Designed and deployed an agentic AI assistant using Retrieval-Augmented Generation (RAG), prompt engineering, and MCP server architecture on AWS EKS, enabling enterprise knowledge retrieval and data-driven decision support
- Designed multi-agent system using LangGraph to automate daily report generation, reducing manual analysis effort and improving turnaround time
- Built and deployed intelligent document management platform improving search and version control, enhancing document accessibility and operational efficiency

- Designed a distributed analytics pipeline using PySpark, BERT embeddings, FAISS indexing, and clustering to process 2.1M+ vendor records, achieving 91% matching accuracy while improving enterprise data quality and enabling scalable data analytics
- Developed an end-to-end machine learning pipeline for invoice payment delay prediction using Python, feature engineering, and statistical analysis, improving working capital efficiency by 7% through data-driven prioritizations

**Petrolink Data Services Pvt Ltd.** | Kochi, India

Apr '17 - Mar '20

*Project Engineer (Engineering and Data Science)*

- Implemented a real-time drilling solution across 10 rigs to monitor flow-back volume & identify anomalies, significantly enhancing operational efficiency
- Deployed the Rule Based & ML techniques to detect washout stuck pipe events, significantly increasing response speed & minimising non-productive time (NPT)
- Created root cause analysis reports library, which helped in reducing support and RCA response time

EDUCATION

**IIIT-Bangalore**

Sep '18 - Sep '19

*Master in Data Science*

**Andhra University** | Visakhapatnam, India

Aug '13 - Aug '15

*Master Of Technology in Petroleum Technologies*
